EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

2. This application is in condition for allowance except for the presence of claims 11-15 directed to an inventions non-elected without traverse (the election without traverse was made July 2nd, 2007). Accordingly, claims 11-15 been cancelled.
3. Claims 1, 3, and 5-10 are allowed.
4. The following is an examiner's statement of reasons for allowance: With respect to claim 1, applicants amendments overcome the prior art. The examiner agrees with applicants remarks filed October 29, 2008, on page 8. Claim 1 is allowable at least in that this claim recites a combination of elements, including, for example, "a first sensor in the body for detecting whether the nozzle of the syringe is in contact with the substrate after the body is lowered; a second sensor for detecting a gap distance between the nozzle and the substrate; and a main unit for controlling the vertical driving stepping motor in response to an output from the second sensor to obtain a desired gap distance between the nozzle and the substrate, wherein the first sensor includes magnetic sensor sending an electric signal to the main unit that changes as the body is lowered by the vertical driving stepping motor toward the table, wherein when the nozzle is in contact with the substrate, the lowering of the body stops so that the electrical signal stops

changing and wherein the main unit recognizes an absence of change in the electrical signal as the nozzle is in contact with the substrate and controls the vertical driving stepping motor to stop the lowering of the body, to raise the body so that a desired gap distance can be obtained between the nozzle and the substrate based upon an output from the second sensor, and to raise and lower the body so that a desired gap can be maintained between the nozzle and the substrate". None of the cited references, singly or in combination, teaches or suggests at least the aforementioned features of the claimed invention.

5. The examiner considers the new elements of "wherein when the nozzle is in contact with the substrate, the lowering of the body stops so that the electrical signal stops changing" and "to raise the body so that a desired gap distance can be obtained between the nozzle and the substrate based upon an output from the second sensor, and to raise and lower the body so that a desired gap can be maintained between the nozzle and the substrate" as distinguishing over the prior rejection. However, as applicant points out, obviousness is evaluated by the whole, and the claims as a whole are not disclosed, taught, or suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George R. Koch III whose telephone number is (571) 272-1230 (TDD only). If the applicant cannot make a direct TDD-to-TDD call, the applicant can communicate by calling the Federal Relay Service at 1-866-377-8642 and giving the operator the

above TDD number. The examiner can also be reached by E-mail at george.koch@uspto.gov in accordance with MPEP 502.03. The examiner can normally be reached on M-F 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Philip Tucker can be reached on (571) 272-1095. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
